

Issues Report

This report outlines current technical and functional discrepancies identified within the platform. The issues are categorized by their respective modules to facilitate efficient review and resolution.

Reported By: Tanzeela

Knowledge Repository / Documents

This section focuses on bugs and limitations related to the document management system and its filtering capabilities.

T-1. Upload bug: Encountered a repeating issue with the department-specific knowledge repository where the "Upload to Repository" popup appears unexpectedly.

T-2. File type restriction: System currently limits uploads strictly to PDF and Excel formats; other standard file types are unsupported.

T-3. Missing file type filter: The "All Types" filter dropdown lacks a **DOC** option, resulting in an inability to filter for existing DOC files.

T-4. Category not working for DOCs: Document category filtering is non-functional for DOC files, operating correctly only for PDFs.

T-5. Lifecycle state issue: All documents are defaulted to "Published". There is no available workflow to select or transition states to Draft, Retired, or Archived.

UI/UX & Navigation

These issues pertain to the user interface stability and the overall navigation flow of the application.

T-6. Client-side application error: Selecting "View Details" in the department repository or project view triggers a **client-side exception** error.

T-7. Dashboard buttons not working: On the "Dashboard", the Documents, Members, Departments, and Recently Created Documents tabs are unresponsive.

Only the Project button is responsive.

Departments & Admin

Administrative and organizational management issues regarding roles and department controls.

T-9. No delete/rename for departments: Lack of administrative controls to modify or remove a department once it has been initialized.

T-10. Super Admin department access: Super Admins are flagged as non-members of departments. Review is needed on whether access should be inherited automatically.

T-11. Unexpected Super Admin role: An unauthorized or unrecognized Super Admin account (Simran) was identified without a clear invite or creation log.
