

KMS vs. RFI 26-002 — Requirements Fit Assessment

NY OAG · Modern eDiscovery Platform with Secure AI Supported Capabilities

Prepared 2026-08-03
Internal — capability gap review

Bottom line: KMS's existing knowledge-management core (ingestion → chunk/embed/summarize, auto-classification, org/department RBAC, hybrid search & RAG chat, audit logging) is a solid foundation for the RFI's AI/retrieval half. The RFI's **eDiscovery-specific** half — Bates stamping, redaction, EDRM export, chain of custody/litigation hold, FOIL bulk-redaction, TAR/CAL — and its **gov-compliance** half (SSO/SAML/SCIM, MFA, malware scanning, FedRAMP/SOC2/CJIS/NIST, WCAG/508) do not exist today and would require dedicated build-out before this could credibly answer the RFI.

HAVE built and working **PARTIAL** designed/adjacent, not complete **GAP** not started

	KMS Today	Customization Needed
Ingestion & Processing (3.1)	PARTIAL S3+SQS pipeline auto-chunks/embeds/summarizes PDF, DOCX, TXT, spreadsheets with OCR fallback. SharePoint connector <i>designed</i> , not built (no external source sync exists yet).	Build M365/email (PST/EML) ingestion, chat platform (Teams) ingestion, mobile/cloud forensic image intake, audio/video transcription.
Review Features (3.1)	PARTIAL Hybrid vector+BM25 search, topic clustering, duplicate-detection design (embedding similarity).	Add entity identification, email threading, legal-grade near-dup review UI (current dedup is a repository suggestion, not a review workflow).
Production (3.1)	GAP Not built.	Bates stamping, redaction (manual + AI-assisted), EDRM-format export, secure external production/sharing — all new.
FOIL / Public Records (3.1)	PARTIAL General audit logging exists (chat/document actions).	Build FOIL review queue, automated PII/sensitive-data detection, bulk redaction tooling.
Chain of Custody / Litigation Hold (3.1)	GAP Not built.	Custody metadata, hold flags blocking edit/delete, hold-specific audit trail.
Secure AI Capabilities (3.2)	HAVE Auto-classification (category/department suggestion), summarization in-pipeline, per-org OpenAI key (org data isolated to org's own key, no shared-model training).	Add TAR/CAL predictive-coding workflow, transcription, image/video analysis; produce formal explainability/AI-audit reports and data-flow documentation.
Security, Privacy & Compliance (3.3)	PARTIAL AWS-hosted (RDS/S3/SQS), org/department RBAC enforced in query layer, audit log table.	No FedRAMP/SOC2/CJIS/ISO27001/NIST 800-53 posture; no MFA/SSO/SAML/SCIM; no ingest malware scanning; no documented retention/destruction or DR/BC plan — all needed for gov procurement.
Admin & Governance (3.4)	HAVE Multi-tenant orgs, department-scoped RBAC, super_admin/dept_admin roles.	Add external/guest reviewer role, policy-configuration UI, admin dashboards/metrics beyond basic audit log.
Integrations (3.5)	GAP No M365, case-management, public API/SDK, or Entra ID integration built yet (SharePoint connector is spec-only).	Build M365 GCC-Moderate connector, case-mgmt integrations, public API/SDK, Entra ID SCIM provisioning/deprovisioning.
Accessibility (3.6)	GAP Not audited.	WCAG 2.1 / Section 508 audit and remediation.
Implementation & Support (3.7)	PARTIAL Single deployment model (multi-tenant SaaS).	Define SLA tiers, training/change-management program, and professional-services structure suited to a large distributed gov office.

Assessment based on current KMS codebase state (repo audit 2026-08-03) against RFI 26-002 §§3.1–3.7. Not a formal compliance certification; intended to scope effort before deciding whether to respond to this RFI.
