Do the 32 EKP requirements cover all three NYPA RFP capabilities?

NYPA RFP Q26-7821RJM · Scope of Services §2.1–§2.3 · October 2026

Short answer: No

The 32 requirements are **only §2.1, the Enterprise KM Platform (EKP)**. §2.2 and §2.3 are separate capabilities with their own requirement lists, so all three sections together have **57 requirements**. The RFP explicitly allows bidding on just one part.

RFP capability	Requirements	Covered by completing the 32?
§2.1 Enterprise KM Platform	32	Yes. These are the 32 requirements.
§2.2 Semantic & Knowledge Creation	15	No. A few benefit indirectly.
§2.3 Lessons Learned Management	10	No. Some §2.1 work can be reused.

Where finishing the 32 helps §2.2 and §2.3

Some §2.1 work builds shared machinery (a taxonomy model, a workflow engine, templates, facets). Reusing it would partly cover these requirements:

Section	Requirement	§2.1 work that helps	Still needed
§2.2	Central taxonomy/ontology management	E15/E16 managed metadata	Ontology model, version control, governance
§2.2	Integrate with other KB systems for tagging	E16 taxonomy import	Export / two-way sync
§2.2	Auto-tag SharePoint docs and video with taxonomy terms	E15 + E20 auto-tagging + E11 video	Write tags back to SharePoint
§2.2	Classification triggers (upload, scheduled batch, manual)	E20 + scheduled sync	Batch-job controls
§2.2	Monitor classification jobs and success rates	Analytics dashboards	Classification-specific reporting
§2.2	Asset templates	E14 templates	Video-format templates
§2.3	Configurable lesson templates and mandatory fields	E14 + E21, applied to lessons	Lesson fields (project type, phase)
§2.3	Lesson publishing workflow	E22 workflow engine, applied to lessons	—
§2.3	Archive / supersede / delete with audit	E23, applied to lessons	—
§2.3	Semantic search and facets for lessons	E3/E4, with lessons included	Lessons search page

What would still need separate work

§2.2 Semantic & Knowledge Creation

- Publishing taxonomies to SharePoint term stores
- AI suggestions for new terms, synonyms and splits/merges
- Classification throughput (500 documents in 30 minutes)
- Knowledge graph export for downstream systems
- Video and transcript segmentation
- Extracting action items and procedures
- Finding knowledge gaps in recorded events
- AI first drafts of FAQs and guides from recordings

§2.3 Lessons Learned

- Multimedia attachments
- AI edit suggestions and duplicate-lesson detection
- Periodic trend reports
- Recommendations by role, project type and phase
- Pushing lessons into Microsoft Teams

Where KMS stands on §2.2 and §2.3 today

Capability	Met	Partial	Gap	Not verified
§2.2 Semantic & Knowledge Creation (15)	1	9	4	1
§2.3 Lessons Learned Management (10)	1	7	2	0

KMS already has a working knowledge graph and lessons capture, which is why each section has one "met".

What this means

Completing the 32 requirements makes KMS a complete **Enterprise KM Platform** bid, which is a valid strategy because the RFP allows single-part responses. Bidding on §2.2 or §2.3 as well would need its own requirements list and workstreams. §2.2 is the larger effort, mainly because of the video and transcript pipeline.
