

KMS Product Requirement Document

Positioning:

An Enterprise Knowledge Operating System is not primarily about storing knowledge. It is about:

- 1. Capturing organizational knowledge.
- 2. Understanding organizational knowledge.
- 3. Connecting organizational knowledge.
- 4. Delivering organizational knowledge in context.
- 5. Learning from organizational knowledge.
- 6. Driving organizational decisions.

Under this model, search becomes important, but not the primary capability. The primary capability becomes **Knowledge Intelligence**.

Product Requirements in Ranked Order:

Enterprise Knowledge Operating System Capability Hierarchy

Tier 1 — Knowledge Intelligence Core

These define the platform.

Without these capabilities, it is simply a document repository with AI.

Rank	Capability	Purpose	Typical Usage	Status
1	Conversational Knowledge Assistant	Primary interface to organizational knowledge	Daily	In Progress
2	Semantic Knowledge Retrieval	Finds information regardless of wording	Daily	Done

Rank	Capability	Purpose	Typical Usage	Status
3	Automated Knowledge Ingestion Pipeline	Converts documents into organizational intelligence	Continuous	TBD
4	Automatic Knowledge Classification	Self-organizing enterprise knowledge	Continuous	Done
5	Cross-Document Reasoning	Connects knowledge across repositories	Daily	Done
6	Knowledge Summarization	Compresses large information volumes	Daily	Done
7	Enterprise Knowledge Repository	Persistent organizational memory	Continuous	Done
8	Knowledge Context Engine	Understands relationships among documents, topics, people, and projects	Daily	TBD

Why These Are Tier 1

These capabilities create the fundamental value proposition:

"Ask anything about the enterprise and get the answer."

This is the operating system layer.

Tier 2 — Organizational Intelligence

These capabilities transform information into enterprise-wide intelligence.

Rank	Capability	Purpose	Typical Usage	Status
9	Expert Discovery	Find who knows what	Daily	TBD

Rank	Capability	Purpose	Typical Usage	Status
10	Knowledge Recommendation Engine	Deliver relevant knowledge proactively	Daily	TBD
11	Lessons Learned Intelligence	Institutional memory	Weekly	NA
12	Knowledge Relationship Discovery	Reveal hidden connections	Weekly	TBD
13	Organizational Knowledge Graph	Enterprise-wide knowledge map	Weekly	TBD
14	Decision Intelligence Repository	Preserve why decisions were made	Weekly	TBD
15	Project Intelligence	Link projects, documents, lessons, experts	Weekly	TBD
16	Topic Evolution Tracking	Monitor how knowledge changes over time	Monthly	TBD

Why These Matter

Most organizations lose knowledge because they know:

- what happened

but not

- why it happened
- who knows about it
- what is related to it

This tier solves that problem.

Tier 3 — Operational Knowledge Delivery

These capabilities drive employee productivity.

Rank	Capability	Purpose	Typical Usage	Status
17	Personalized Knowledge Workspace	Role-based information delivery	Daily	TBD
18	Intelligent Onboarding Assistant	Accelerate employee ramp-up	Daily	TBD
19	SOP and Process Intelligence	Guide process execution	Daily	TBD
20	Context-Aware Knowledge Delivery	Deliver information based on current task	Daily	TBD
21	Training Knowledge Hub	Learning and enablement	Weekly	TBD
22	Team Knowledge Spaces	Collaboration and knowledge sharing	Weekly	TBD
23	Meeting and Conversation Capture	Preserve tacit knowledge	Daily	TBD
24	Knowledge Reuse Engine	Prevent duplicate work	Weekly	TBD

Why These Matter

This tier directly impacts:

- employee productivity
- onboarding
- operational efficiency

which are often the primary business drivers.

Tier 4 — Governance and Trust

These features make the platform enterprise-ready.

Rank	Capability	Purpose	Status
25	Knowledge Ownership Framework	Accountability	TBD

Rank	Capability	Purpose	Status
26	Version Control	Information integrity	TBD
27	Approval Workflows	Quality control	TBD
28	Security & RBAC	Access management	TBD
29	Audit Trail	Compliance	TBD
30	Content Lifecycle Management	Knowledge hygiene	TBD
31	Retention Policies	Regulatory compliance	TBD
32	Data Lineage	Traceability	TBD

Why These Are Lower

Users rarely interact with them directly.

Executives demand them.

Administrators manage them.

But they are not the primary value drivers.

Tier 5 — Autonomous Enterprise Intelligence

These are the strategic differentiators.

Rank	Capability	Purpose	Status
33	Knowledge Gap Detection	Identify missing knowledge	TBD
34	Emerging Topic Detection	Spot new trends	TBD
35	Organizational Risk Detection	Identify knowledge risks	TBD

Rank	Capability	Purpose	Status
36	Predictive Knowledge Delivery	Deliver knowledge before it is requested	TBD
37	AI Knowledge Curator	Automatically improve content	TBD
38	Decision Recommendation Engine	Recommend actions	TBD
39	Autonomous Knowledge Maintenance	Self-maintaining repository	TBD
40	Enterprise Digital Brain	Unified organizational reasoning layer	TBD

What Investors and Buyers Will Care About

If you are pitching this platform, the most compelling hierarchy is:

Level 1 — Ask

- Conversational Knowledge Assistant
- Semantic Retrieval

Level 2 — Understand

- Topic Modeling
- Auto Classification
- Summarization
- Cross-Document Intelligence

Level 3 — Connect

- Expert Discovery
- Knowledge Graph
- Decision Intelligence

Level 4 — Learn

- Lessons Learned

- Topic Evolution
- Knowledge Gap Detection

Level 5 — Act

- Predictive Knowledge Delivery
- Operational Guidance
- Decision Support

This progression moves the product from:

Document Management System → Knowledge Management System → Knowledge Intelligence Platform → Enterprise Knowledge Operating System

which is where the strongest strategic differentiation lies.

Product Differentiation:

From a commercialization perspective, the strongest differentiator in your architecture is actually **automatic topic discovery + Bhattacharyya-distance-based document domain assignment + conversational retrieval**. Many platforms have vector search and chatbots today; far fewer can automatically build and maintain a meaningful enterprise knowledge taxonomy without extensive human curation. That capability should be highlighted as a top-tier differentiator in the product strategy and messaging.
