If every KMS PRD tier were built, would KMS meet the NYPA RFP?

NYPA RFP Q26-7821RJM · Enterprise Knowledge Platform, 32 requirements (§2.1) · October 2026

Short answer: No

Even with all PRD tiers implemented (Ranks 1–40), KMS would fully meet about **14 of the 32** requirements. **8** would be partly met and **10** would not be addressed at all. The PRD is a roadmap toward knowledge intelligence. The RFP mostly asks for enterprise platform features (connectors, managed taxonomy, analytics) that no PRD tier covers.

Fully met	**14**: 8 already met today, plus 6 covered by PRD Tiers 3–5 (mainly Tier 4 governance)
Partly met	**8**: a PRD rank contributes, but part of the requirement is still missing
Not met at all	**10**: no PRD rank addresses them

Requirements not met at all (10 of 32)

#	RFP requirement	Why no PRD tier covers it
E2	Unified search across SharePoint (mandatory), Content Server and ServiceNow, respecting original permissions	The PRD has no connector or integration capability (per-file SharePoint permissions, Content Server, ServiceNow)
E12	Site pages, wikis and knowledge articles in connected systems	Same: no connector capability
E3	Semantic/hybrid search combining keyword and ontology-driven results	The PRD has no taxonomy or ontology management
E4	Faceted navigation based on taxonomy/ontology	Same: no managed taxonomy to build facets from
E15	Managed metadata fields with hierarchical terms and synonyms	The PRD relies on automatic topic discovery "without extensive human curation". NYPA asks for human-governed vocabularies.
E16	Integration with NYPA/Canals' taxonomy/ontology tool	No taxonomy integration in the PRD
E10	Confidence scores and explainability for AI answers	Not a PRD capability
E13	Indexing, previews and thumbnails for visual content	Thumbnails and visual previews are not a PRD capability
E29	Usage and adoption dashboard (searches, CTR, time-to-answer, top queries, bounce)	The PRD has no analytics or dashboard capability
E31	Governance metrics (review/validation compliance)	Same: no analytics capability

Requirements partly met (8 of 32)

#	RFP requirement	PRD rank that helps	Still missing
E1	Landing page customizable to NYPA/Canals	17 Personalized Knowledge Workspace	Admin-configured org landing page and branding
E11	Formats incl. PPT, PDF, video, images	23 Meeting & Conversation Capture (audio/video)	PowerPoint and image support

#	RFP requirement	PRD rank that helps	Still missing
E14	Configurable templates for knowledge assets	19 SOP & Process Intelligence, 24 Knowledge Reuse	Admin-configurable template builder
E19	Auto-generated summary with human review	27 Approval Workflows, 37 AI Knowledge Curator	A defined summary review step
E21	Minimum metadata completeness before publishing	27 Approval Workflows, 30 Content Lifecycle	Required-field rules
E28	Content health dashboard	30 Content Lifecycle, 39 Autonomous Maintenance (signals)	The dashboard itself
E30	Search quality metrics (no-results, precision proxies, dwell)	33 Knowledge Gap Detection	No-results and click-through tracking, dashboard
E32	M365 as single source of truth	28 Security & RBAC (likely Microsoft sign-in)	Deep links to SharePoint, no-copy storage

What this means

The PRD alone can't serve as the roadmap for the NYPA bid. Its three blind spots are **integrations**, **managed taxonomy** and **analytics**. Tier 4 (governance) matters most for NYPA, while most of Tiers 3 and 5 aren't asked for in the RFP. The EKP implementation plan's workstreams cover all of the requirements above, and should drive the NYPA work.

Note: Ranks 17–40 exist in the PRD only as one-line capability names, so this mapping assumes each is scoped in the obvious way. The 6 requirements fully covered by the PRD are E5 (saved searches/watchlists), E22 (publishing workflow), E23 (archive/supersede with audit), E24 (ownership), E25 (review workflows) and E26 (stale-content triggers).
